A / The audience balloon garden

Q1. Which game genres tend to attract the largest number of players?

Computed from the local CSV. Digital sketch reference; redraw with pen on paper.

LEGEND / MARKS + CHANNELS

Circle area = mean owner-band midpoint per game (quantitative); radius is proportional to square root of that mean.

Label + grid position identify genre (nominal). Strings are decorative. Printed values show approximate mean owners.

DRAW: Draw eight balloons of different sizes, label the genre above and mean owners inside. Keep one common area scale.

READ WITH CARE: A few blockbusters can inflate means. Excludes 0-0 owner bands; genres overlap. Owners are not active players.

B / A hundred games in each genre

Q1. Which game genres tend to attract the largest number of players?

Computed from the local CSV. Digital sketch reference; redraw with pen on paper.

Action

<100k 89.7% | 100k-1m 8.2%

>=1m 2.1% | n=41,427

RPG

<100k 88.1% | 100k-1m 10.0%

>=1m 1.9% | n=18,624

Adventure

<100k 91.0% | 100k-1m 7.7%

>=1m 1.3% | n=40,497

Strategy

<100k 88.7% | 100k-1m 9.8%

>=1m 1.5% | n=19,847

Simulation

<100k 90.7% | 100k-1m 8.0%

>=1m 1.3% | n=21,363

Sports

<100k 92.5% | 100k-1m 6.4%

>=1m 1.1% | n=4,305

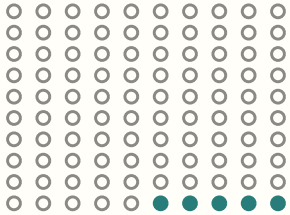

Indie

<100k 92.7% | 100k-1m 6.6%

>=1m 0.7% | n=71,914

Casual

<100k 94.9% | 100k-1m 4.6%

>=1m 0.4% | n=43,710

LEGEND / MARKS + CHANNELS

Each 10x10 grid = 100% of eligible titles in one genre; each dot = 1 percentage point, not one literal game.

Hollow gray = midpoint <100k; solid teal = 100k to <1m; solid orange = >=1m estimated owners (ordered bands).

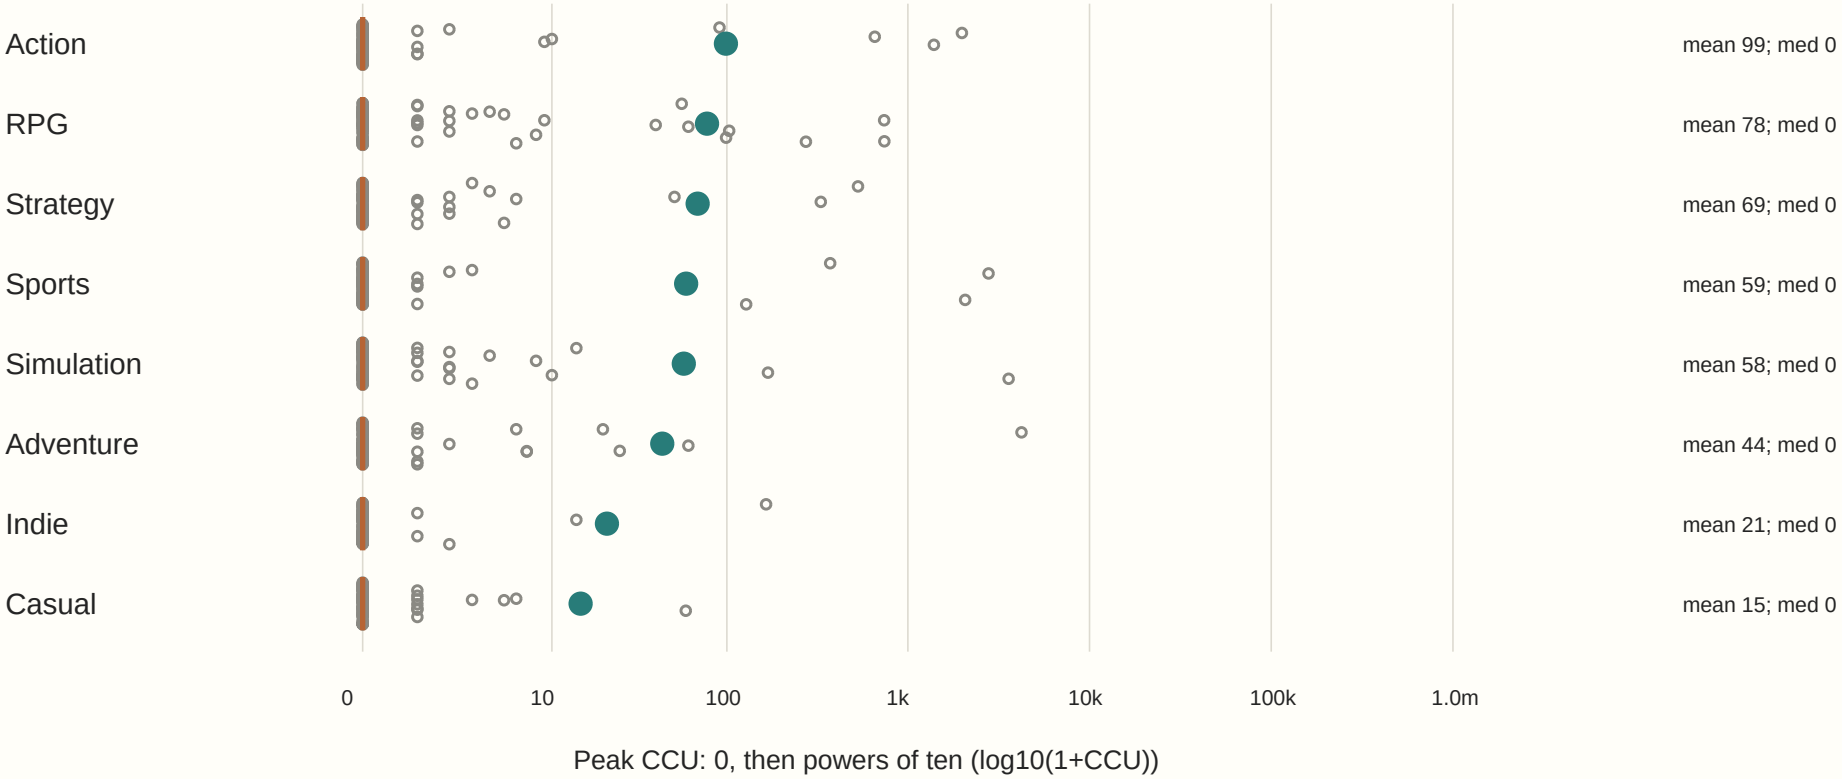

DRAW: Draw 100 small circles per genre, then shade by reach band. For a faster rough sketch, use a rectangle split into bands.

READ WITH CARE: Dots use largest-remainder rounding to total 100%; labels show unrounded shares to 0.1%. Excludes 0-0 owner bands.

C / Genre fireflies: concurrent players

Q1. Which game genres tend to attract the largest number of players?

Computed from the local CSV. Digital sketch reference; redraw with pen on paper.

LEGEND / MARKS + CHANNELS

Hollow dot = one real sampled title (70 per genre); x = Peak CCU (quantitative); y lane = genre (nominal).

Solid teal dot = full-genre mean; orange vertical tick = full-genre median. Vertical jitter only separates overlapping dots.

DRAW: Draw one horizontal swarm per genre on a shared ruler. Add a large mean dot and a short median tick.

READ WITH CARE: Includes CCU zeros. CCU is not total owners or unique genre players; the field's observation window is unverified.
